

# OnRamps Physics 1

Study motion, energy, force, waves and how science relates to the world around you. **Build Rockets, Roller Coasters and Catapults!!!**

## Benefits:

- **Dual Enrollment class-** This means you take two classes at once. One class will count as a high school grade with a high school teacher and another class will be online with a college professor from UT Austin. Two different grades. **Your college grade will be based on a collection of assignments instead of one exam like AP.**
- **A tutor to help you-** The goal of the High School instructor is to teach you the main concepts that will help you with the college class. Its like having a tutor that will help you with the concepts you don't understand while taking the college class.
- **Saving money-** If you complete the course you will have the chance at earning college credit. A CREDIT THAT IS GUARANTEED TO BE ACCEPTED AT ANY UT BASED SCHOOL (EX: UTEP, UT AUSTIN, UT SAN ANTONIO)
- **Low Risk-** If you don't like your college grade at the end of the year you can opt to have the college grade completely wiped off of your college transcript. It will be like you never even took the course.
- **It is a weighted GPA class and if you complete one OnRamps class you will be eligible to receive a cord at graduation.**
- **Any questions? Visit Mr. Hernandez in e248 (main campus)**
